Hisham Ibrahim is currently a Professor of Biochemistry and Structural Biology at Kagoshima University (Japan). He obtained his PhD degree in Structural Biology and Protein Engineering from Tottori University (Japan) in 1993. He became a research group leader in Taiyo Kagaku Central Research Institute (Mie, Japan). In 1995, he became Assistant Professor at Kagoshima University, and pursued a research fellowship in the Center for Antimicrobial Research (CAR), California State Polytech University, Los Angeles (USA). He was appointed as Associate Professor in 2001, and become a full Professor of Structural Biology at the Department of Biochemistry & Biotechnology in 2010. He is a conference organizer and session chair in the American Chemical Society (ACS) and the American Oil Chemists Society (AOCS). He is an Editorial Board of Journal of Developing Drugs, Journal of Insights in Medical Science, Journal of Functional Foods in Health and Disease, and Journal of Food Science and Engineering.

His current research focuses on the discovery and development of bioactive peptides and proteins with therapeutic potential to fight infections, cancers and inflammatory diseases. Other research relates to the development of novel drug-delivery system for specific targeting of drugs into their intracellular targets by using food-derived proteins combined with nanotechnology for the treatment of cancers and complicated infectious diseases.

He succeeded in introducing several scientific findings in reputable international journals and in well-recognized books.
